

Junior Height Bottle Filling Station

Product Code DFFSJ-CF

The cup and bottle filling station is wall and floor mounted at junior height and provides a safe solution for younger children to refill water bottles and cups. The timed flow filler is activated by press button which turns off when released preventing water wastage. The fountains and shrouds are produced from grade 304 1.6mm thick stainless steel for durability and resistance to vandalism. The removable shroud is held on with security screws and conceals the waste and supply pipework for safety. Polished to a satin finish the junior height bottle and cup filling station is easily cleaned, whilst the smooth radius design helps prevent injury associated with sharp corners. The bottle filling fountain provides easy access to safe drinking water, where younger children are able to re-fill their sports bottles, promoting the benefits of hydration at an early age.

Width: 305mm.

Depth: 350mm from wall.

Height: 760mm plus 75mm rear upstand.
